                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Analysis of a lysozyme gene from the malaria vector mosquito, Anopheles gambiae.",
Gene 174:239-244(1966).
-!- FUNCTION: LYSOZYMES HAVE PRIMARILY BACTERIOLYTIC FUNCTION; THOSE IN TISSUES AND BODY FLUIDS ARE ASSOCIATED WITH THE MONOCYTE-MACROPHAGE SYSTEM AND SHANCE THE ACTIVITY OF INMUNAGEBYS.
-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages between N acetyl-D-glucosamine and N-acetylmuramic acid in peptidoglycan heteropolymers of the prokaryotes cell walls.
-!- SIMILARITY: BELONGS TO FAMILY 22 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-NOV-1997 (Rel. 35, Created)

RY Clostridial neurotoxins.";

RY CLOSTRIDIAL COLLINUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER

CC PUBLEASE. IT BINDS TO PERTHERAL NEURONAL SYNAPSES, IS INTERNALIZED

CC AND MOVES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD

WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT

CC INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

CC ENDOPEPTIDASE THAT CLEAVES SYNAPTORREVIN-2.

CC INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

CC INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

CC INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

CC INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC

CC INHIBITS NEUROTRANSMITTER CHANNEL OF THE HEAVY CHAIN MEDIATE CHANNEL

CC INHIBITS NEUROTOXIN BINDING, RESPECTIVELY.

CC INHIBITS NEUROTOXIN BINDING, RESPECTIVELY.

CC INHIBITS NEUROTOXIN BINDING, RESPECTIVELY.

CC INHIBITS NEUROTOXIN: TYPES A, B, C1, D, E, F, AND G.

CC NEUROTOXIN.

CC INHIBITS NEUROTOXIN BINDING NEUROTOXINS AND WITH TETANUS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence:
         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                    Score
